I have been building Android apps for 7+ years and over time my focus has naturally shifted from just making things work to understanding why they work, how they break and how to build them so they don't.

My stack is Android native and Kotlin Multiplatform, but what I really care about is the full picture. Architecture, integrations, IoT connectivity, the invisible layers that make an app actually good. I have shipped large scale consumer apps, worked end-to-end from early requirements to production and consulted on smart home products used by real people every day.

In my spare time I build stuff at the intersection of Android and IoT. Not because I have to, but because I find it really interesting and it keeps me honest about how the whole stack fits together.
